HealthInfoNet

Creating better, easier, and safer healthcare solutions.

What is HealthInfoNet?

- HealthInfoNet manages a secure computer system used by the healthcare community to share health information with the purpose of providing you with better and safer care.
- The system brings your health information together into a single electronic record.
- Providers already share your health records via fax, email, and mail. HealthInfoNet makes sharing methods easier, faster, and more secure through its computer system.

What are the benefits?

- HealthInfoNet helps your healthcare providers work together to make informed decisions about your care, especially in emergencies and transitions of care.
- Other benefits may include fewer mistakes, fewer repeat tests, less paperwork, lower costs, and better care decisions.
- Learn more at hinfonet.org/for-patients

What is in my record?

- Your health record includes information about your prescription medicines, allergies, test results, visits and documents, procedures, and more.
- It also includes demographic information, including your name, date of birth, address, and phone number.
- Sensitive information is only included if you say it's okay, or in the case of an emergency.

Is it private and secure?

- HealthInfoNet takes every action to keep your records private and secure.
- Information is encrypted and sent over private and secure computer connections.
- Information that identifies you will not be sold or added to any mailing lists.
- Only those involved in your health care are authorized to access your record.

What if I don't want a HealthInfoNet record?

If you do not want your health information in a HealthInfoNet record, you may choose not to share your health information by filling out an "opt-out form" found online at hinfonet.org/for-patients or by calling HealthInfoNet's Customer Support team at 866-592-4352.
